Clings to
BLING[®]

**PRODUCT
CATALOGUE**

How to apply BLING® *Step by Step*

Step 1

Put gloves on.
Pre-clean surface
using Bling® cleaner.

Step 2

Apply Bling® evenly
to surface (in a
circular motion)

Step 3

Allow 1 hour
cure time before
contact with water.

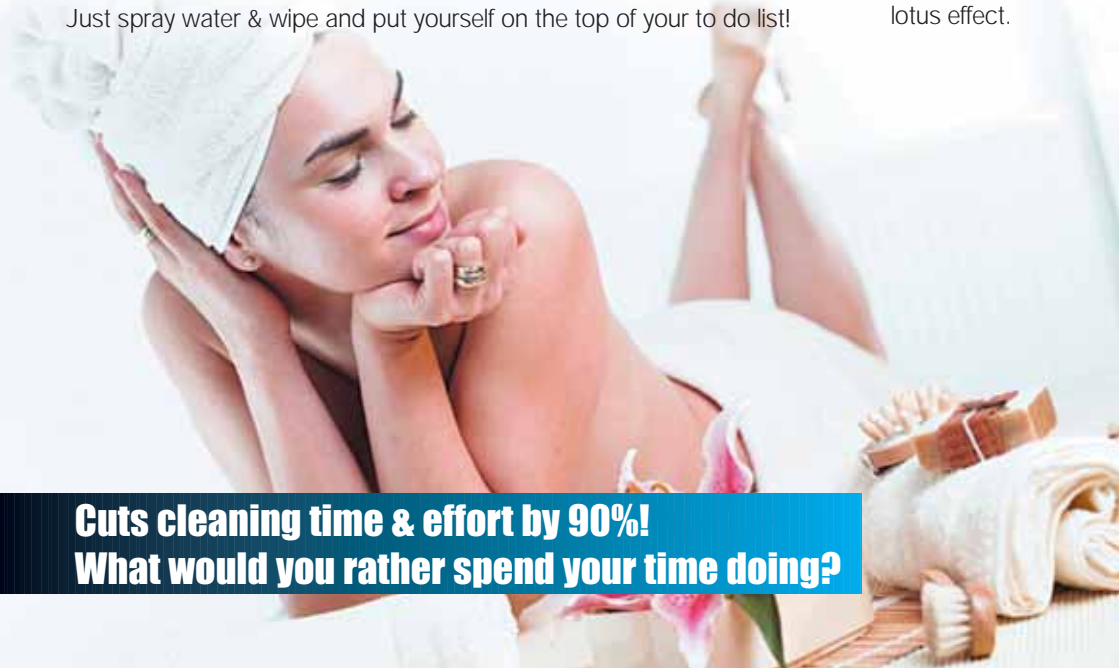

Step 4

Polish surface with
damp microfibre
mitt until the surface
is completely clear.
This will activate the
lotus effect.

Maintenance

Just spray water & wipe and put yourself on the top of your to do list!

Cuts cleaning time & effort by 90%!
What would you rather spend your time doing?

INNOVATION INSPIRED BY NATURE...

What is Bling?

What is Bling®?

A range of protectants designed to save you time and money.

What does Bling do?

Once applied Bling creates an ultra thin, invisible coating that is hydrophobic and works by repelling water and preventing adherence of foreign matter on the surface.

How does Bling work?

Our Bling® products use a nanotechnological coating that provides a non-stick protective barrier on most glass and ceramic surfaces.

What is nanotechnology?

Nanotechnology is attracting growing interest worldwide. The word 'nano' comes from the Greek word 'dwarf' and it means that the size of the particles are really, really small. It also refers to the creation, investigation and application of structures, molecular materials, internal interfaces or surfaces with at least one critical dimension or manufacturing tolerances of (typically) less than 100 nanometers.

As you may already know; rainwater is repelled by lotus plants. Why? Because these plants have a natural cleaning mechanism and raindrops have almost no contact with the surface. Water droplets roll off the leaf and take dirt, insects, contaminants, water based adhesives, honey, oil and other substances with them.

HOW CAN BLING® BENEFIT ME AND MY FAMILY?

Spend less time cleaning

Instantly save money on cleaning products

Environmentally friendly

Reduces water usage

Repels dirt and other contaminants

Keeps surfaces cleaner, longer!
